

Interview Introduction

Himanshu Shekhar | React Native Mobile Developer

Full Introduction (about 1.5 minutes)

1. NAME AND EDUCATION

Hello, sir. Thank you for giving me this opportunity. My name is Himanshu Shekhar, and I'm from Jharkhand. I'm a React Native Mobile Developer with around 2 years of experience in building cross-platform mobile applications for Android and iOS. I completed my MCA from Lovely Professional University after earning my Bachelor's degree in Computer Applications from BIT Mesra.

2. CURRENT ROLE

Currently, I'm working as an Associate Software Engineer at Tech Mahindra, where I'm contributing to mobile application development for our client, GE Vernova.

3. DATA DYNAMICS PROJECT

In my current role, I work on an enterprise-grade mobile application called Data Dynamics. It's an offline-first application that allows field technicians to fill out dynamic forms, even when network connectivity is unavailable. I've worked on developing a JSON-driven dynamic form engine that supports conditional logic, field-level validation, and reusable form components. I've also implemented offline data persistence using Realm and MMKV, along with synchronization mechanisms to sync pending submissions when connectivity is restored.

4. TECH AND SKILLS

I regularly integrate REST APIs and focus on writing clean, reusable, and scalable code. I manage application state using Context API in my current project, and I've used Redux Toolkit earlier in web projects. I've built 15+ screens and 25+ reusable components, and worked on camera and document integration, signature capture, and image and PDF annotation using React Native Skia. I've also written 20+ test files using Jest and React Native Testing Library, covering form rendering, conditional logic, and annotations.

5. PREVIOUS EXPERIENCE AND TEAMWORK

Apart from mobile development, I have previous experience building responsive web applications using React.js, JavaScript, Material UI, and Redux. I also collaborate with business analysts, QA engineers, and backend developers in Agile Scrum teams, using tools like JIRA and Git.

6. GOAL

I'm now looking for an opportunity where I can leverage my React Native expertise, take on greater technical ownership, and contribute to building scalable, high-performance mobile applications. Thank you.

Short Version (about 30 seconds)

Hello, sir. I'm Himanshu Shekhar, a React Native developer with around 2 years of experience at Tech Mahindra, working with our client GE Vernova. I completed my MCA from Lovely Professional University and my BCA from BIT Mesra. In my current role, I work on Data Dynamics, an offline-first mobile app where field technicians fill dynamic, JSON-driven forms without network connectivity. I built the form engine with conditional logic and validation, offline storage using Realm and MMKV, and a sync system for pending submissions. I'm looking for a role where I can take more technical ownership and build scalable mobile applications. Thank you.

Quick Memory Cheat Sheet

- **Name and education:** Himanshu, Jharkhand, MCA (LPU), BCA (BIT Mesra)
- **Current role:** Tech Mahindra, client GE Vernova, 2 years, React Native
- **Data Dynamics:** offline-first, JSON form engine, Realm + MMKV, sync
- **Tech:** Context API, REST, camera, signature, Skia annotation, Jest/RNTL
- **Goal:** more ownership, scalable mobile apps

Tips while speaking

- Do not memorize word by word. Remember the 5 blocks and speak naturally.
- Speak slowly and keep eye contact. Pause briefly between blocks.
- Only claim what you can explain in depth. Expect follow-ups on Realm, sync, Skia annotation, and Context API vs Redux.
